Multiple Inheritance Solutions

Multiple Inheritance

- Explain briefly what is meant by multiple inheritance
    - In multiple inheritance, a derived class has more than one parent
- Write a simple program which uses multiple inheritance

Class scope

- What effect does the following code have?

  bool Device::initialize(Params&);

  void TouchResponder::initialize();

  Mouse mouse;

  mouse.initialize();

  - Compiler error
  - Even though Device::initialize() and TouchResponder() take different arguments, the call cannot be resolved
